ASHTA Chemicals publishes our new Safety Prioritization for all existing ASHTA products.

As a member of the American Chemistry Council and an audited implementer of RESPONSIBLE CARE®, ASHTA Chemicals has completed the required safety prioritization of all existing company products in accordance with the requirements of the 2013 Product Safety Code. In keeping with the ACC RC Product Safety Code, ASHTA applied a science- and risk-based approach, considering hazard, intended uses and exposure potential to not only trained industry work force, but the impact on the general public from use, misuse, transportation incidents and security risks, when prioritizing the products. In the spirit of transparency and Community Outreach that analysis is made available on the web page under “other forms and documents” at the top of the page.
